

Equipois Inc., Manufacturer of the Revolutionary zeroG™ Ergonomic Support Arm, Closes Series B Investment Round Led by Terrapin Partners, LLC

May 21, 2008, Santa Monica, CA – Equipois Inc., manufacturer of zeroG™ high-performance ergonomic support arms, today announced that it closed a \$3.45 million Series B preferred stock offering with an investor group led by Terrapin Partners, LLC.

Designed by renowned inventor Garrett Brown, Equipois' zeroG™ technology utilizes a patented spring, cam and gimbal-based architecture to "float" objects as if virtually weightless while allowing them to be maneuvered almost effortlessly, with full range of motion and functionality. By significantly decreasing the exertion required to operate tools and manipulate other objects while performing work tasks, the zeroG™ technology reduces workplace injuries that are estimated to cost U.S. businesses more than \$200 billion each year. The zeroG™ can also enhance productivity by increasing the speed and accuracy of workplace tasks for manufacturing, bioscience, and a range of other applications. Equipois launched its first product line, the zeroG⁴, at the Applied Ergonomics Conference in March, 2008.

Jason Weiss, principal of Terrapin Partners, LLC, said "We are very impressed with the zeroG technology and its potential to address fundamental challenges faced by manufacturers, including an aging workforce and escalating health care costs. The Equipois team has started the company on a high growth trajectory, and we look forward to helping them continue on this successful path."

Eric Golden, President and CEO of Equipois Inc., said "We are excited to partner with an investor group that not only brings growth capital, but a wealth of experience in helping emerging growth companies achieve long-term success. This funding round gives Equipois the resources to implement a broad roll-out of the zeroG™ technology to help businesses reduce injuries and increase productivity."

###

ABOUT EQUIPOIS INC

Founded in 2006, Equipois designs and manufactures revolutionary technologies that allow tools, parts or equipment to be maneuvered as if weightless, but with full range of motion. The company's patented zeroG™ systems are designed to support a range of manufacturing, heavy industrial, bioresearch, medical and other applications in order to reduce workplace injuries and associated costs while increasing productivity.
